Arnaud Prudhomme : Le Breguet Aliz (Les Materiels de l'Armee de l'Air) (French Edition) before purchasing it in order to gage whether or not it would be worth my time, and all praised Le Breguet Aliz (Les Materiels de l'Armee de l'Air) (French Edition):

French TextA history of this aircraft to the anti-submarine struggle marine, the first prototype was unveiled in 1956 and which underwent several changes before being put into production in 1959. Breguet Aliz was used by the Naval Aviation, mainly on aircraft carriers, until 2000.REVIEWS The book gives a good story to the development of the aircraft and goes through each unit which operated them, including those in the Indian Navy. It is well illustrated throughout, with archive photos, detail drawings and some fine colour profiles... For modellers there is plenty of good reference information thanks to all the illustrations even if your ability with reading the text in French is not that
