han guo Jong le Narachu ban she : Learning Math through Origami and CutPaste Crafts-5 to 6 Years Old Elementary (Chinese Edition) before purchasing it in order to gage whether or not it would be worth my time, and all praised Learning Math through Origami and CutPaste Crafts-5 to 6 Years Old Elementary (Chinese Edition):

The content is scientifically and logically graded according to the difficulties and kids age, so that parents and teachers can make a good teaching plan. Combining math, origami, cutting and pasting together allows kids to use their hands

and heads. Color papers and stickers attached not only help them to learn but also make the process more interesting.
